Hyperlink Verification Audit Report

AI Observatory Dataset - Judicial AI Tools

Dataset: 20260114 Data AI 2025 December - Consolidated.xlsx

Sheets Audited: 7

Total Link Entries Processed: 1620

Unique URLs Tested: 231

Generated: 2026-05-22 07:26 UTC

1. Summary Overview

Overall Statistics

Metric	Value
Total link entries processed	1620
Unique URLs tested	231
Working links	1202 (74%)
Non-working links	418 (25%)

Breakdown by Error Type

Classification	Count
Active (200)	1202
Access Denied (403)	135
Not Found (404)	118
Network Error: Connection Error	79
Invalid URL (text in link field)	63
Client Error (400)	14
Network Error: Timeout	8
Network Error: SSL Error	1

Breakdown by Sheet

Sheet	Total	Working	Problematic
Projects	326	191	135
ProjectsFR	197	156	41
Data	1038	806	232
Land Register	3	2	1
E-filing	11	8	3
E-Auction	1	1	0
Private providers	44	38	6

2. Detailed Error Report - All Non-Working Links

This section lists every non-working link discovered during the audit, grouped by sheet. For entries where the link field contains descriptive text instead of a URL, this is noted as "Invalid URL".

Sheet: Projects (135 problematic links)

3. Key Findings & Recommendations

1. Recurring broken URL (Austrian Ministry of Justice)

The PDF at justiz.gv.at (IT-Anwendungen document) appears 8+ times across entries and consistently returns 404. This single resource accounts for a significant portion of broken links. Recommendation: Find updated URL or archive copy.

2. Brazilian host completely unreachable

All links to ciapj.fgv.br (37 entries) fail with connection errors. The entire domain appears down or blocking international access. Recommendation: Contact FGV directly or find mirror.

3. Data quality issues - Text in link fields

Approximately 60+ entries contain French-language tool descriptions or placeholder text ('public authority', 'internal system', 'translation missing') placed directly in Link/Link1 columns. These are data entry errors, not broken links. Recommendation: Clean dataset to separate descriptions from URLs.

4. 403 responses requiring manual verification

135 entries returned 403 (Access Denied). Many are from legitimate sites (academic journals, government portals, AI platforms like Claude.ai, OpenAI, Perplexity) that block automated requests. These may work fine in a browser. Recommendation: Manually verify in browser.

5. Singapore government chatbots discontinued

Three go.gov.sg/chat-* short URLs all return 404, suggesting services have been removed. Recommendation: Mark as discontinued or find replacement links.

6. Meta AI (ai.meta.com) returns 400

Likely requires JavaScript execution or specific browser headers. Recommendation: Verify manually and note as functional with browser access.
